

Whitepaper – Littera Token

1. Introduction

The publishing industry is constantly changing, and independent authors face significant challenges in publishing, promoting, and monetizing their works. Littera Token emerges as an innovative, decentralized, blockchain-based solution to support new authors, connect readers to new content, and create a sustainable ecosystem for digital literature.

2. Project Overview

Littera Token is a project based on the Polygon network, with the goal of creating a decentralized literary ecosystem. Our goal is to allow independent authors to publish their books and receive direct support from the community through visibility, tokenization, creation of exclusive NFTs by authors, works, or genres, exclusive user access to works and authors through staking or NFTs, and many other possibilities that will come to the project with support, criticism, and suggestions from the community itself, in addition to participation in votes.

3. Tokenomics

- Token Name: Littera Token
- Symbol: LITK
- Network: Polygon
- Total Supply: 10,000,000,000 LITK

3.1 Supply Distribution

- Pre-sale: 35%
- Liquidity (DEX/QuickSwap): 25%
- Reserved for CEX: 20%
- Rewards & Partnership: 12%
- Team & Development: 0.8% (with 25% monthly vesting after presale)

Tokens not sold in the presale will be burned to ensure scarcity and token value.

Wallet CEX, Rewards, Founders: Vesting / Multisig / Vesting

4. Pre-sale

- Start: May 2025
- Duration: 1 month
- Payment currency: MATIC (Polygon)
- Locked: 100 days

Objective: To finance the development of the Android application and boost the Littera ecosystem, create marketing campaigns in specialized media, create first partnerships.

5. Android App

The Littera app will be the main channel for accessing the e-book collection. Features will include:

- Login with MetaMask
- Intuitive interface with book thumbnails, author name and description
- Online reading of e-books
- Integration with the project's marketplace
- Automatic staking verification to grant access to content (Metamask)

Requirements for unlimited access to books:

- Staking of at least 50,000 LITK for 7 days
- Staking reward: 20% per year

6. Literary Marketplace

The marketplace, hosted on the official website, will be the meeting point for authors and readers. It will be possible to:

Publish literary works (authors)

Buy and support books using LITK, search and comment on works and other possibilities yet to be defined.

6.1 NFT Marketplace

This will be a marketplace for NFTs created exclusively for authors, works or literary genres. NFTs will provide exclusive access to content (which are not works from the digital collection) or direct access to authors, chat, groups, exclusive sweepstakes or other possibilities yet to be defined. NFTs of writers' works will be paid to the writers and will only be made after permission.

7. Governance

Governance will be carried out off-chain, by Snapshot, with rules defined to ensure community participation:

- Minimum quorum: 35%
- Voting power proportional to the number of staked tokens
- Minimum stake: 100,000 LITK staked

Proposals include: new features, listings, use of the development fund, improvements to the application

8. Project Phases (Roadmap)

Phase 1 – May/2025

- Pre-sale launch
- Whitepaper launch
- Beginning of website construction (marketplace and other menus)

Phase 2 – Jun/Jul/2025

- Burn of unsold tokens of Pre-sale
- Listing on DEX (Quickswap)
- Beginning of development of the Android application.

Phase 3 – September 2025

- Launch of the Android app
- Release of access to e-books for users with staking
- Launch of the marketplace NFTs and Digital books

Phase 4 – December 2025

- Listing on CEX
- Partnerships with publishers and influencers
- Promotions for new authors

2026 onwards

- Expanding the collection
- Web version of the reader
- Online literary events with community participation
- And other possibilities according to the community

9. Security and Sustainability

- Staking system with minimum token lock-up
- Decentralized storage of e-books
- Protection against bots and unauthorized access
- Smart contract audits before first listing

10. Vesting Details: CEX Reserve & Founders' Allocation

To ensure transparency and sustainable growth, two key allocations of the LITK token will be placed under smart contract-based vesting via **Team.Finance**.

CEX Reserve

- **Allocation:** 2,000,000,000 LITK (20% of total supply)
- **Purpose:** Reserved for centralized exchange (CEX) listings
- **Vesting Platform:** Team.Finance
- **Vesting Start:** Immediately if Pre-Sale reaches SoftCap
- **Release Schedule:** 25% unlocked every 60 days (full release over 8 months)
- **Smart Contract:** Public and verifiable on PolygonScan (link will be published)

Founders' Wallet

- **Allocation:** 800,000,000 LITK (8% of total supply)
- **Purpose:** Reserved for the founding team and development
- **Vesting Platform:** [Team.Finance](#)

- **Vesting Start:** Immediately if Pre-Sale reaches SoftCap
- **Release Schedule:** 25% unlocked every 30 days (full release over 4 months)
- **Smart Contract:** Public and verifiable on PolygonScan (link will be published)

These vesting mechanisms ensure that token releases are gradual and aligned with the long-term vision of the project, while giving the community full visibility and trust.

11. Conclusion

Littera Token proposes a new way to foster literature, empowering authors and rewarding readers. By combining blockchain, staking and a dedicated app, we want to create a solid, engaged and sustainable literary community.

FAQ

1 - What are the real earning possibilities with the token?

A: By investing in Littera Token, you earn in several ways: by staking, you will receive 20% per year; by staking, the token increases in value because there will be less stock of it on the market; you will be able to acquire NFT cards of your works, authors or literary genres that you can resell or use to participate in exclusive online events, groups, access to content that is not offered in the token's partnership with the authors, raffles for gifts or digital content (famous books and e-books, for example) and several other options to be defined for the NFTs. And what's more: in the case of financing an author's first prints, the token may have a share of the royalties, which will be reverted to the holders of the stake or marketing on the back cover of the book, bringing more visibility and value to the token.

I could not fail to mention: Littera is not a memecoin, it is a serious, socially responsible token, committed by its founder to ensuring transparency to the community. The token launched with a supply of 10,000,000,000 (and pre-sale burns reducing that amount) could easily reach the \$1 mark over time. Littera is a token that has been thought about for many months before taking shape, and it plans to change the world of digital literature.

2 - Why aren't the app and platform launched right away?

A: Littera's founders are not developers, so we need to receive a portion of the Pre-Sale to finance the development of the app and the completion of the web platform.

For further questions, please send us an email (available on our website).
